www marathi zavazavi pornzavazavi.net, Hindi movie free kathas Zavazavi. Synthesis and Biological Evaluation of Cyclic 1,2,3-Triazoline-Pyridines. We describe a series of cyclic 1,2,3-triazoline-pyridines. Cyclization of 7-amino-1H-1,2,3-triazoles with formamides and isocyanides generated anilinopyridines in moderate to good yields. The 1,2,3-triazoline-pyridines with alkyl chain at C-5 position, a CO-GluN2-binding region, provided the good inhibitory activity against  $\alpha$ -amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid receptors and it was possible to inhibit protein kinase A (PKA) and protein kinase C (PKC). This invention pertains to certain olefin polymerization catalysts and to the polymerization of olefins using such catalysts. The use of alkyl metal trifluorides as a polymerization catalyst for olefin polymerization is well known in the art. The most commonly used metal trifluorides are aluminum trifluoride and boron trifluoride. In U.S. Pat. No. 4,175,169 to Mareska, J. F. West, et al, incorporated herein by reference, there is described a catalyst system

for ethylene polymerization comprising a metal trifluoride supported on a silica-alumina molecular sieve, said catalyst system having a selective activity for ethylene polymerization to a substantial excess of polymer. It is described that an aluminosilicate molecular sieve is very suitable as support for such catalysts. In U.S. Pat. No. 3,847,964 to Losin, et al, a catalyst system for ethylene polymerization comprises a boron-containing molecular sieve, such as a silica-alumina molecular sieve, as support for a metal alkyl and hydrogen. In the case of said catalyst system, it was found that the polymerization proceeded at a higher temperature and with higher catalyst activity. This invention does not contemplate the use of a metal trifluoride supported
